Firas Saada

Software Engineer, Integrations & Full Stack (TypeScript / Node.js / Vue 3)

firassaada1111@gmail.com | (+216) 96 584 668 | Tunis, Tunisia · Open to relocation to Toulouse

SUMMARY

Software engineer connecting third-party systems to a production B2B platform. On METIS (corporate travel booking), I built the Hertz and Carbookr integrations end to end and am the main developer of the Transavia airline booking flow, working directly with providers' teams from first API call to production certification. I own the car rental section (Node.js, PostgreSQL, Vue 3) and its production support, and build my own Claude Code agent skills.

TECHNICAL SKILLS

APIs & Integration: REST and XML (OTA 2003/05) third-party APIs, WebSockets, token-based auth, data mapping and import
Programming: TypeScript, JavaScript, Python, SQL
Backend: Node.js, Express, Sequelize, Keycloak
Frontend: Vue 3, Nuxt, Pinia, Vuetify, Angular, Google Maps / Places API
Databases: PostgreSQL (full-text and geo queries)
DevOps & Tools: Git, AWS (S3, ECS), Docker, Azure DevOps CI/CD
Practices: AI-assisted development (Claude Code, Cursor), Agile, Code review via merge requests

PROFESSIONAL EXPERIENCE

Software Engineer (Freelance, Full-time) | Everbloo — Apr 2025 – Present

METIS, corporate travel booking platform (Groupe Adenis) · France (Remote)

- Built the Hertz integration from scratch on the OTA 2003/05 XML standard (6 message flows) as METIS's technical contact in Hertz's technical meetings; passed Hertz production certification as the platform's first live car provider, then extended it to Thrifty, Dollar and Firefly.
- Built the Carbookr aggregator connector end to end over REST (token caching with refresh fallback, geo search, booking, two-step modification) and ran the technical exchange with Carbookr's team: API clarifications, error diagnosis from request/response traces, certification prep and a scenario document for their validation; live since Sep 2026.
- Main developer of the Transavia airline booking flow (LCC API): offer details, booking, payment, retrieval and after-sales, ancillaries (baggage, seats, sports equipment), payment fees and Flying Blue loyalty.
- Integrating the BSP Auto broker XML API (station import, rate search, booking, cancellation); now running its production certification with BSP Auto's IT support, go-live pending.
- Own the car rental section across the Node.js/Express/PostgreSQL API and the Vue 3/Nuxt front end, and am the primary contact for its production issues reported by client travel agencies.
- Mapped XML and JSON supplier data into one booking model: station import into PostgreSQL, equipment, insurance and extras mapping, user-facing errors, every call archived to AWS S3.

DevOps & Frontend Engineer Intern | Callem — Jun 2024 – Dec 2024

Voice-AI startup · France

- Built the Angular chat interface connecting users to the platform's AI agents in real time over WebSockets.
- Replaced manual deployments with 10 Azure DevOps CI/CD pipelines for 5 apps, including the LLM executor and vector store.

AWS / DevOps Freelancer | Upwork client — May 2024 – Jun 2024

United Kingdom (Remote)

- Designed and deployed a highly available AWS architecture with Terraform (ECS, ALB, VPC, API Gateway).

PROJECTS

AI agent skills (Claude Code) and a source-cited CV generator (Python)

- Claude Code skill driving git and the GitLab CLI to open merge requests with team templates and reviewers.
- CV pipeline: JSON fact base with a source id on every line, LLM tailoring skill, Python (fpdf) renderer.

CERTIFICATIONS

- AWS Certified Developer – Associate

EDUCATION

Engineering degree (MEng, Bac+5), Software Engineering / Mathematics and Computer Science — 2020 – 2025
